All of these readings are based on 6mm clear single glass pane

Cost Efficient - Solar Control

It helps reduce heat and glare while maintaining clear views, making it a suitable choice for projects seeking effective solar control without moving into the premium Prestige range.

Natural, Low Reflective Appearance

Maintains a natural-looking glass finish with low interior and exterior reflectivity, helping preserve clear views without the strong mirror-like appearance

No metal. No signal interference.

The non-metallised construction avoids the signal interference associated with metal-containing films, making Prestige particularly suitable for communication-sensitive environments.
