All of these readings are based on 6mm clear single glass pane

Premium solar performance
Helps reduce solar heat and cooling demand while maintaining a bright, comfortable interior.

Advanced multilayer nanotechnology
Hundreds of ultra-thin, non-metallised layers are engineered to reflect infrared solar energy while allowing visible light to pass through.

No metal. No signal interference.
The non-metallised construction avoids the signal interference associated with metal-containing films, making Prestige particularly suitable for communication-sensitive environments.
